Your Family Spending Plan

by Extension Family Economics Specialists, 1998

Almost everyone would like to have more money. However, more money isn't always possible and doesn't always solve the problem. Most people must get along on what they have.

Whether a family has a lot of money or just a little, a sound plan for spending and saving is the key to having dollars for what is needed and wanted before the money disappears in unexpected ways. A spending plan can help a family:

- ! identify available resources
- ! plan for today and tomorrow
- ! spend and save more effectively
- ! develop confidence, independence, and resourcefulness in handling financial problems

A plan for spending and saving possesses no magic. It cannot change the amount of money you have. It cannot make you save. Neither can it eliminate financial crisis. But a spending plan can help control the use of money so it meets needs and wants.

Preparing a Spending Plan

Essentially there are three basic steps in setting up a plan:

- ! determine income
- ! estimate expenses
- ! adjust spending to income available

Use worksheets I through IV to record your income and expenses. Once these items are down on paper, you can see where your money is going. Then you are better prepared to decide where you would like your money to go.

Step 1

Using Worksheet I, enter each person's takehome pay. If someone is paid weekly, multiply by 52 to get yearly income. If paid monthly, multiply by 12. Multiply by 26 if one is paid every 2 weeks and by 24 if paid twice every month.

Total all the individual yearly incomes to find the family's yearly income. Add any interest, dividends, or other income. Use this sum as the total family income available for expenses.

Worksheet I		
<i>You:</i> \$	Take-home pay each pay period (after taxes and other payroll deductions)	
	Number of times a year paid	
\$	TOTAL YEARLY INCOME	
Spouse: \$	Take-home pay each pay period	
	Number of times a year paid	
\$	TOTAL YEARLY INCOME	
	amily Members: Take-home pay each pay period	
	Number of times a year paid	
\$	TOTAL YEARLY INCOME	
\$	TOTAL FOR ALL MEMBERS	
\$	Interest, dividends, other regular income	
\$	TOTAL FAMILY INCOME	

Step 2

Use whatever financial records you have to estimate your expenses. Work from checkbooks, receipts, and current pay statements. Do not list the same expense on more than one worksheet.

Weekly Expenses. Using Worksheet II, on the next page, list the amount your family spends for items purchased weekly. Include any day-to-

day expenses as well as bills paid by the week. If you have any expenses not listed on the form, write them in.

Add the total weekly expenses. Multiply this amount by 52 to get an annual estimate of your total weekly expenses.

Monthly Expenses. On Worksheet III, list all bills and expenses you pay by the month. If you have any expenses not listed on the form, write them in.

Add the monthly expenses. Multiply this amount by 12 to get an annual estimate of your total monthly expenses.

Annual Expenses. Some expenses come irregularly, once or twice a year. On Worksheet IV, list expenses that have not already been recorded. Unexpected or emergency expenses could also be recorded here. Listing these expenses before they happen will help you set aside money ahead of time.

Add the yearly expenses.

Step 3

To compare your expenses with your income, complete these blanks:

\$	Total Family Income (I)
\$ \$ \$	Weekly Expenses (II) Monthly Expenses (III) Annual Expenses (IV)
\$	Total Expenses

Do expenses equal income? If expenses are greater than income, you will need to decide what to do. Review your expense lists again (Worksheets I, II, and III). Are there items that can be reduced? Postponed? Eliminated?

Consider the needs and wants of the entire family. Involve everyone in the planning

discussions. Were you unable to get some of the things you wanted? Did you spend too much for one item with not enough to cover other items? You may need to evaluate your spending and saving to see what changes can be made.

Family Spending Plan

Practice keeping financial records so you can use real amounts in planning instead of estimates. Your records show what you actually spent for each budget category and can help you see where spending can be adjusted.

Use a calendar, ledger, or some other method to record your expenses. Then use the **Monthly Spending Plan** worksheet to compare what you actually spent with what you planned to spend. This will help you allocate money for all expenses.

After you develop a monthly spending plan, consider future goals and plan for a longer time period. For example, when the car is paid off, will that money be saved, put on another debt, or just spent? Or will it be set aside in a car replacement fund?

Don't be discouraged if the plan doesn't work the first time. It takes time and sometimes several adjustments to make a spending plan work.

Monthly Spending Plan

	Actual	Planned
Total Monthly Income		
\$ for Weekly Expenses		
\$ for Monthly Expenses		
\$ for Annual Expenses		
Balance		

Worksheet II Weekly Expenses

\$	Food (at home and away from home)
\$	Household Supplies
\$	Recreation (movies, hobbies, sports)
\$	Transportation (gas, parking, etc.)
\$	
\$	
\$
